

BAR FABRICATION

Features

Durable Construction

C-channel stiffeners are welded to the backsplash and to the one-piece side and leg pad for greater strength and rigidity.

Welded construction with bolt-on legs. Leg tubes set into recessed sockets for added strength.

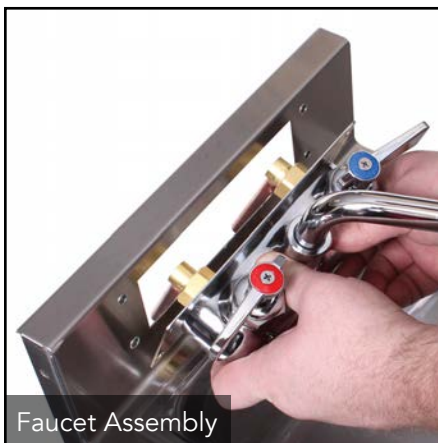

View from backside

Quality Materials

20-gauge fabricated bowls are 70% thicker than the industry standard.

Seamless Backsplash

One-piece seamless backsplash and front skirt on combo ice bins are easier to keep clean and more aesthetically pleasing.

Faucet Assembly

Keep It Clean

Radius corners on blender stations and drainboards, so that cleanup is a breeze.

Efficient Aeration

Drainboards have fully corrugated work surface for increased aeration of glassware

Service Friendly

Backsplash faucets are removeable from the front of the equipment for easier service.

Threaded Inserts

Mount standard size speed rails easier and more securely with threaded inserts.
